Sakina Kulsum

sakinakulsum82@gmail.com | linkedin.com/in/sakinakulsum | github.com/kulsum2001

Professional Summary

Full-stack developer who builds and deploys complete web applications with React, Django, Flask and PostgreSQL. Experienced in secure authentication (JWT, TOTP 2FA), REST API design, and CI/CD with Docker and GitHub Actions. Completed a Python AI/ML internship (NLP classification). Seeking a Full-Stack Developer role.

Experience

Python AI/ML Developer Intern November 2024 – January 2025
Dotch Endeavors

- Built an NLP classification model achieving 92.07% accuracy on Amazon Alexa reviews, including data preprocessing and feature engineering (Python, Scikit-learn, Pandas).
- Performed exploratory data analysis (EDA) and validated results with cross-validation (Matplotlib, Seaborn).

Projects

FormMetrics: Full-Stack Form Builder & Analytics Platform Live Demo | GitHub
React, Django REST Framework, PostgreSQL, JWT, Docker, GitHub Actions, Render

- Built a drag-and-drop form builder (7 question types, conditional logic, autosave, live preview) with link/QR publishing and a quiz mode with server-side scoring.
- Designed a versioned JSON-schema model in PostgreSQL; validated every submission server-side and used row-level locking to enforce response limits under concurrency.
- Built a Recharts analytics dashboard with CSV export (formula-injection safe); implemented JWT auth with refresh, password reset and rate limiting.
- Set up a GitHub Actions CI pipeline and a multi-stage Dockerfile; deployed on Render with Lighthouse scores of 96 (performance), 100 (accessibility) and 100 (best practices).

VeriVault: Document Management & Integrity Verification System Live Demo | GitHub
Django, REST API, SHA-256, TOTP 2FA, Gunicorn, WhiteNoise, Render

- Built a Django document vault with SHA-256 fingerprinting to verify files are unaltered, including a public verification page using client-side hashing (Web Crypto API).
- Designed a REST API without DRF (token auth, 30+ endpoints) with audit logging, and a rule-based engine that scores vault health and flags duplicate files by hash.
- Added TOTP 2FA (RFC 6238), re-authentication for sensitive files, login throttling and file version rollback; deployed with Gunicorn and WhiteNoise on Render with Lighthouse scores of 99 (performance), 98 (accessibility), 100 (best practices) and 100 (SEO).

Gestational Diabetes (GDM) Risk Prediction Web Application Live Demo | GitHub
Flask, XGBoost, SHAP, Gunicorn, Render

- Built a Flask app with authentication, patient data input, XGBoost-based GDM risk prediction (89% accuracy), prediction history and a dashboard.
- Added SHAP explanations for each prediction, automated PDF reports, and email alerts for high-risk results via the Resend API; used lightweight CSV file storage for users and predictions.
- Deployed on Render with Gunicorn and environment-based secret and API key management.

Technical Skills

Frontend: HTML5, CSS3, JavaScript, React.js, Recharts
Backend: Python, Django, Django REST Framework, Flask, REST API Design
Auth & Security: JWT, TOTP 2FA, SHA-256 hashing, Rate Limiting
Databases: PostgreSQL, SQL
DevOps & Deployment: Docker, GitHub Actions (CI/CD), Gunicorn, Render
Tools: Git, GitHub, VS Code, Postman

Education

Visvesvaraya Technological University Feb 2024 – Nov 2025
Master of Computer Applications (MCA) *CGPA: 8.98*
Maharani Science College for Women Jul 2019 – Sep 2022
Bachelor of Computer Applications (BCA) *CGPA: 8.69*

Certifications & Publication

Python AI/ML Developer Certificate, Dotch Endeavors Nov 2024 – Jan 2025
Power BI Domination Workshop 2025
Publication: "Leveraging ML for Early Prediction of Gestational Diabetes Mellitus", ECTST-2025 Aug 2025
